

This homework is due on Tuesday, February 2.

1. Solve the following initial-value problems using the method of characteristics.

(a) $u_x + u_y = u^2$, $u(x, 0) = x$.

(b) $u_x + (u + y)u_y = -u$, $u(x, 0) = x$.

2. Solve the following Cauchy problems using the method of characteristics.

(a) $xu_x - xu_y = u - 1$, $u(x, x^2) = x^3 + x^2 + 1$.

(b) $uu_x + u_y = 2$, $u(x, x) = x$.

3. Is it possible to solve the problem

$$u_x + u_y = 0, \quad u(x, x) = 2$$

using characteristics? Solve it or explain why you can't.
